I'm Taquedees Sayed, sister of Juweria Sayed. I have completed my matriculation education and this year I'll be in a higher secondary school. I went through the Womanium cataraqt project and quite liked it. I read the tutorial, I learned quantum computing for the first time and I feel like I should learn and read more about quantum because I am interested in it. I am a student and I will definitely study quantum computing along with my studies Because after reading it for the first time, I got very interested and got to learn something. I really liked the third tutorial, which is about superconducting qubits. All other tutorials including Image processing and Representation are also very interesting. The tutorial is explained in a very simple way even a beginner can read and understand. The aim of this project is great. I am happy to know that quantum cataraqt is going to help people through quantum computing in a very new way. I highly recommend this project.
